Eliminate Wi-Fi Dead Spots with D-Link Power Line and Range Extenders

The affordable and compact way to **extend your Wi-Fi coverage** for improved connectivity throughout your home.

UNDERSTANDING DIFFERENT OPERATION MODES

Access Point Mode

- ▶ Access Point mode allows the device to act as a central hub for wireless users, giving them access to your existing wired network.
- ▶ Connect the DAP-1665 or DAP-1360 to an existing wired network and easily enable wireless connectivity in your home.
- ▶ Use your new wireless network to stream HD multimedia content, play multi-player games, or make Internet phone calls (VoIP).

Range Extender Mode

- ▶ Range Extender mode extends wireless coverage of your existing wireless network to cover “dead” spots and reach further into your home or office.
- ▶ Ideal for customers with bigger homes or offices, environments where structural interferences occur with wireless signals (i.e. brick homes), and double storey homes that have longer distances to cover.
