29.4. Unknown virtual protocol

Unknown is a virtual protocol created for DPI that represents flows that are not recognized by the system. Most of the time, its presence is due to the existence of a business application whose specifications are not made available to the public. Such flows can be defined in the system by means of a User Defined Application.

31.475. Data Saver

Data Saver is an optional feature in Chrome. When activated, HTTP traffic will go through Google's proxy servers that will reduce traffic by compressing and optimizing data. By default, the connection to Google proxy servers is over HTTP/2 and encrypted. If the URL `http://check.googlezip.net/connect` is blocked, the connection to the proxy servers will be over HTTP/1.1 and unencrypted. HTTPS and traffic generated from Incognito mode won't be proxied. Data Saver can be activated in Chrome's settings on Android or through a Chrome extension on PC. Data Saver is not available on iOS.
